Department of Civil Engineering
REPORT ON Environmental Engineering – An Attractive Specialization for Civil Engineers

Date: 1st November, 2019

Venue: Seminar Hall I

A seminar was conducted for the final year Civil Engineering students by Prof. Dr. Johannes Fritsch. He is the faculty of Technology and Management, University of Applied Sciences Ravensburg -Weingarten. The seminar commenced with a brief description of Germany and his university in Weingarten. Later on topics related to waste water treatment were discussed. He examined the topic 'water' in its importance for the economy and society in India. He also explained in detail about Singapore's approach to water reuse, specifically with reference to NEWater- Singapore's brand for high grade reclaimed water and highlighted the factors that had played a critical role in the successful introduction and implementation of water reuse. At the end of the seminar an interactive session was conducted, wherein students were given chance to ask him questions. The seminar was really effective as students were able to clear all their doubts especially those regarding water and waste treatment.
